

The claims defining the invention are as follows:

1. A re-sealable pocket having a first and second opposing panel fixedly connected to each other along a pair of sides and a bottom edge, a plurality of holes provided along a side of the pocket and a closure mechanism provided along a top edge of the pocket whereby the top edge of the pocket can be opened or closed.
2. A re-sealable pocket as claimed in claim 1 wherein the closure mechanism is a press-lock mechanism having a male and a female track which are adapted to inter-engage with each other and provide a seal when the two tracks are "pressed" together.
3. A re-sealable pocket as claimed in claim 2 wherein press-lock mechanism is re-sealable.
4. A re-sealable pocket as claimed in claim 1 wherein located along, and integrally formed with the bottom edge is a gusset.
5. A re-sealable pocket as claimed in claim 4 wherein the gusset is provided with at least one fold which is adapted to provide separating portions for contents to be kept.
6. A re-sealable pocket as claimed in claim 4 or 5 wherein associated with the gusset or pocket is a divider to permanently separate contents located therein.
7. A re-sealable pocket as claimed in claim 1 to claim 6 wherein located on the first panel of the pocket is a slot or area.

-8-

8. A re-sealable pocket as claimed in any one of the above claims wherein the pocket is made of a durable transparent material such that the contents are visible to the user.
9. A re-sealable pocket as claimed in claim 8 wherein the material around the or each hole is reinforced to give strength to the pocket.
10. A re-sealable pocket as claimed in any one of the above claims having a colour coded system.
11. A re-sealable pocket substantially as herein described with reference to the accompanying drawings.
